PROFESSIONAL SUMMARY

Aspiring **Software Engineer** specializing in full-stack, backend, and distributed systems, with experience designing and deploying scalable, cloud-native applications. Skilled in building RESTful APIs, real-time systems, and event-driven architectures using **Node.js, Express.js, React.js, and AWS**. Strong foundation in **data structures, system design, and performance optimization**.

EDUCATION

Bachelor of Technology in Computer Science and Engineering
Vaagdevi College of Engineering, Warangal | **CGPA: 7.95/10.0**

Aug 2023 – May 2026

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, SQL

Frontend: React.js, HTML5, CSS3, TailwindCSS, Bootstrap

Backend: Node.js, Express.js, RESTful APIs, WebSockets (Socket.io), JWT

Databases: MongoDB, MySQL, PostgreSQL

Cloud and DevOps: Docker, Git, GitHub, AWS (S3, ECS, ECR, IAM)

Coursework: Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks, OOP

WORK EXPERIENCE

Software Development Intern – Full Stack | Edunet Foundation

Nov 2024 – Jan 2025

- Architected a **real-time music streaming platform** using **MERN and Socket.io**, enabling synchronized playback with **sub-100ms latency** and live user presence tracking
- Implemented **JWT-based authentication and RBAC**, containerized services using **Docker**, and optimized RESTful APIs improving response time by **20%**
- Reduced frontend load time from 4.2s to 2.8s (**33% improvement**) through lazy loading and memoization

PROJECTS

Event-Driven Cloud Deployment Platform

GitHub

Node.js, Express.js, React.js (Vite), PostgreSQL, Prisma, Apache Kafka, ClickHouse, AWS (ECS Fargate, S3, ECR), Docker, Socket.io, JWT

- Designed and built a **Vercel-inspired cloud deployment platform** enabling automated **Git-based deployments** by orchestrating **isolated Docker build containers** on **AWS ECS Fargate**; artifacts stored on **Amazon S3** and served via a **dynamic subdomain reverse proxy**
- Architected an **event-driven pipeline** (Build Server → Kafka → API Server → ClickHouse) for real-time build log streaming to a React dashboard via **Socket.io**, with TLS/SASL-secured Kafka and **JWT-based multi-tenant auth** ensuring secure and scalable deployment workflows

Real-Time Music Streaming Platform

GitHub

React.js, Node.js, Express.js, MongoDB, Socket.io, Clerk Auth, Cloudinary, Docker, GitHub Actions

- Built **RESTful APIs** and implemented real-time communication using **Socket.io** to support live chat, presence tracking, and synchronized playback across concurrent users
- Implemented **Clerk authentication**, role-based admin dashboard for album and song management, media uploads via **Cloudinary**, and automated deployment using **Docker and GitHub Actions CI/CD**

User Management System – Full Stack

GitHub | Live

Node.js, Express.js, MongoDB, React.js (Vite), JWT, Docker, Jest

- Built a production-grade system with **JWT authentication, RBAC** (admin/user roles), and automated testing using **Jest and Supertest** with full endpoint coverage
- Containerized the backend with **Docker and GitHub Actions CI/CD**; deployed frontend on Netlify and backend on Render with zero-downtime releases

ACHIEVEMENTS AND CERTIFICATIONS

- HackerRank Campus Ambassador** – Selected to represent HackerRank, promoting coding culture and competitive programming on campus
- Full-Stack Development Certification** – AICTE | **Python Programming** – Cisco | **MongoDB Atlas Essentials** – MongoDB University
